2020: Slide from poster presentation at the Association of Maternal & Child Health Programs (AMCHP) annual conference.

US Gov. Office of Special Education and Rehabilitative Services features Minneapolis direct service cross systems design

From the Directors

Hello, Early Learning Leaders!

August is Children’s Eye Health and Safety Month. To honor this designation, our Voices in the Field interview with Cindy Hillyer, director of the Office of Early Childhood Education at Minneapolis Public Schools, highlights the importance of collaboration between service delivery systems. Hillyer leads a Minnesota Early Childhood Screening program that provides a universal, required health and education screening touch point for 3- through 5-year-olds before kindergarten, including a vision health screening. We invite you to read the full interview on the [OSERS Blog](#).

August 2020: Advancing equity through service systems alignment and collaboration leads to improvements in care coordination, direct services, policy development and child and family outcomes.

COVID Task Force pivot: policy-planning-parent engagement

1. Advocacy & policy agenda

2. Capacity building

- early care and education
- dental therapist example
- rural-urban alignment

3. Communication

- parent survey
- policy agenda: what's our ask?

2021-2022 Rural Urban engagement, develop policy agenda, philanthropy engagement, parent engagement.

Parent Survey Results

Column1	Column2	Column3	Column4

2021 task force developed, administered and analyzed results of parent survey focused on communication, access and barriers.

Focus Forward

Improve Communication

- parents/caregivers
- policy makers

Sustain direct service systems design

- partnerships
- resource alignment

Scale

- Rural-urban alignment
- Philanthropy engagement

Spread

- Policy agenda & legislative action
- Link early and elder eye health priorities

Impacting Best Vision Health for Children in Arizona

Karen Woodhouse, MS
Director, Eyes On Learning

A blue-tinted photograph of two young girls in a classroom. They are both looking at a book held by the girl on the right. The girl on the left is pointing at the book. The background shows a classroom setting with a whiteboard and other students.

Eyes On Learning is a statewide coalition of children's vision partners. We believe that every child should experience their best vision health and learning success, which is why we work together so that every child receives vision screening, and an eye exam and treatment if needed.

eyesonlearning.org.

2018 Survey of Community Health Centers (70% response rate)

89% conduct vision screening for children 5 years and younger

51% use instrument-based screening for young children

49% use chart-based screening, but less than 50% of attempted chart screenings are completed

Partnership to fund
Photoscreener Grants for
62 health care and
education organizations
serving vulnerable
children

35,000 more children
to receive annual
screening

Better Vision Together Community of Practice

Accelerate how participants in the COP provide quality vision screens and successful referrals for the children they serve

- 2 virtual Communities of Practice: photoscreener grantees in health care and education/community settings met September 2020 – May 2021
- Parent partners were peer-participants in each COP with access to parent partner support
- Acknowledged COVID-19 impacts on their screening efforts
- Participants used their reported screening data during their COP participation for quality improvement

Path to Healthy Vision

Screening › Eye Exam › Treatment

Routine vision screenings are important for a child's growth and learning milestones.
Children should receive vision screening:

For the First Time
as Early as Age 1

At Least Once Between
3-5 Years Old

Every 1 to 2 Years
Throughout Grade School

Healthy vision is critical for every child's social development, school success, and well-being.

A child's vision develops from the time he/she is born until kindergarten. Infants can only clearly see objects that are 8 to 10 inches from their faces. A baby's eyesight begins to improve at about 3-4 months old. Over the next few years, a child develops his/her ability to see further away, judge distances, and improve eye-body and eye-hand coordination.

It is critical to identify issues with eye health and vision development at a young age—problems are easier to correct when treatment starts early. Some problems, like amblyopia (also called "lazy eye"), can cause permanent vision loss if not caught and treated early.

- **Watch for signs that your child has a vision problem.**
These include squinting, itchy eyes, excessive blinking or tearing, headaches, tiring when reading, or sitting close to the TV or computer screen.
- **Request a vision screening for your child, even if he/she does not show signs of a vision problem.**
You can do this at your well-child visit or take your child to an eye doctor (optometrist or ophthalmologist).
- **Take your child to an eye doctor for a complete eye exam.**
If your child fails a vision screening, you should take him/her to an optometrist or ophthalmologist to determine if he/she has a vision problem.
- **Ensure your child follows the recommended treatment plan.**
If the eye exam shows your child has a vision problem, the eye doctor may prescribe glasses or another treatment option to best support his/her vision health needs.

The Eyes On Learning Vision Coalition is a dedicated group of state, local, and national organizations that share a commitment to vision health and learning success for all Arizona children.

EyesOnLearning.org

The proportion of Arizona children enrolled in Medicaid receiving a vision screening increased in all age groups

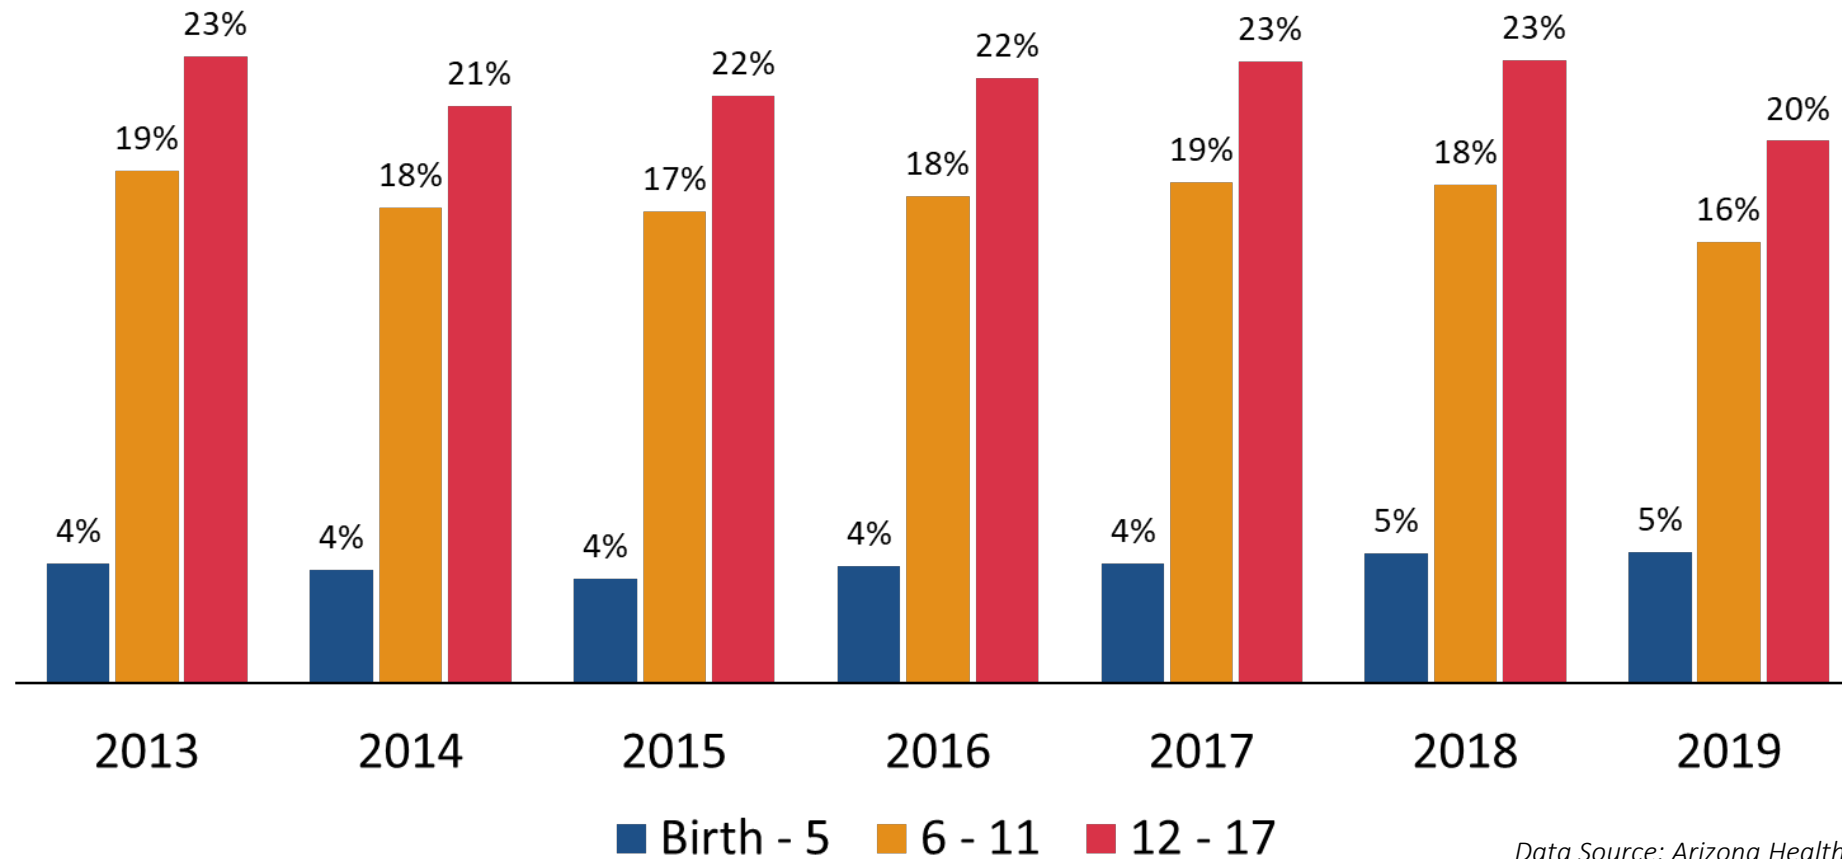

Data Source: Arizona Health Care Cost Containment System (AHCCCS) claims

Fewer Arizona Native American children enrolled in Medicaid receive vision screening

Data Source: Arizona Health Care Cost Containment System (AHCCCS) claims

More School-Age Children Should Receive Eye Exams After Screening Referral (at least 25-30%)

Data Source: Arizona Health Care Cost Containment System (AHCCCS) claims

81% of all children receiving an eye exam and diagnosis of vision problem receive treatment

Data Source: Arizona Health Care Cost Containment System (AHCCCS) claims

Future Focus

Ramp up parent awareness and action campaign

Increase Parent Partners in EOL leadership

Support health and education providers in using their local data systems to identify areas for improvement

Seek and use data to inform targeted efforts
